Risk Assessment to minimise the risk of being exposed to COVID-19

The process involved consultation with school staff which took place at a meeting in school on 17/7/20 and again on 24/8/2020, with all staff including principal, Caitriona Uí Cheallaigh, Safety Officer Steven Ó Canainn, Lead Worker Representative Patricia Ní Ghrodaí and Safety Representative, Patsy Coyle.

Methodology used for hazard identification and control

In line with the requirements of Safety, Health and Welfare at Work Act 2005 (section 19) it is the policy of the Board of Management in Scoil Fhionáin to address significant hazards and risks in the workplace, to assess the risks to safety, health and welfare and to control these risks as far as is reasonably practicable.

The Board is committed to the ongoing identification of hazards, the assessment of the appropriate risks and the introduction of controls to deal with them. In addition, staff are involved and participate in safety, health and welfare issues within the school and are encouraged to identify and report any potential hazards that may exist and to ensure that a risk assessment is carried out.

This revised Risk Assessment includes all relevant updates and necessary control measures to minimise the risk of staff and others being exposed to COVID-19 and these will be incorporated into the Safety Statement for Scoil Fhionáin in line with requirements of section 20 of the 2005 Act.

It is envisaged that additional reviews will be undertaken on a regular basis and in line with Government and public health advice to ensure that all information remains accurate, that controls are appropriate and where necessary risks are reassessed.

A **hazard** is anything with the potential to cause harm to the safety, health or welfare of staff, students, visitors and contractors – a wet or slippery floor, an unguarded machine, stressful work, a blocked entrance, hazardous chemicals etc. Hazards may be classified as physical, chemical, biological, environmental or human.

A **risk** is the likelihood that someone will be harmed by a hazard and the severity of that harm.

Control measures:

A control measure is an applied measure that reduces the level of risk. Control measures can be applied at the planning stage, can comprise physical measures, can be management issues and can include training. Good control measures will require a combination of some or all of these.

Control measure principles:

Schedule 3 of the Safety, Health and Welfare at Work Act 2005 lists the Principles of Prevention and the Board of Management undertakes to apply these principles (where practicable) in dealing with all risks within the school:

- Avoidance of risks
- Evaluation of unavoidable risks
- Combating of risks at source
- Adaptation of work to the individual
- Adaptation of workplace to technical progress
- Replacement of dangerous articles, substances or systems of work by safe or less dangerous articles, substances or systems of work
- Priority to collective protective measures over individual protective measures
- Development of an adequate prevention policy which takes account of technology, organisation of work, working conditions, social factors and the influence of factors relating to the working environment
- Appropriate training and instructions to employees.

When the safety audit identifies hazards, it is necessary to evaluate and rank them so that they can be controlled in an orderly way. The risk of a hazard is a measure of the likelihood or probability of an accident coupled with the severity of the injury or loss. The risk potential of each hazard was assessed (by ranking) by giving numerical values of between 1 and 5 to both the **severity** of the consequences and the **probability** of the event occurring. When the severity numerical factor and the probability numerical factor were multiplied together, they produced a number between 1 and 25 thereby producing the numerical values outlined in **risk rating** chart below.

$$\text{Severity} \times \text{Probability} = \text{Risk Rating}$$

Severity

Severity Rating	Interpretation	Numerical Value
Fatality or Catastrophic	Single or multiple fatalities, widespread illness, large scale property or equipment damage	5
Major	Serious injury or illness, significant property or equipment damage	4
Moderate	Injury and damage to property	3
Minor	Minor injury or illness, minor property or equipment damage	2
Trivial	No significant injury or illness, no significant property or equipment damage	1

Probability/Likelihood

Probability Rating	Interpretation	Numerical Value
Inevitable	Likely to occur either immediately or in the short term	5
Very Likely	Could occur in time or if repeated enough	4
Likely	Likely to occur	3
Unlikely	Though unlikely, may occur over time	2
Rare	Unlikely to occur at all	1

Risk Rating

Numerical Value Severity x Probability	Descriptive risk rating	Interpretation
16 – 25	Emergency – Extremely serious If an incident were to occur, it would be likely that a permanent, debilitating injury or death would result	Risks are unacceptable and immediate action required justifying special maintenance. Activity should be halted and stopped until the hazard is eliminated or appropriate risk controls are put in place.
11 – 15	Severe and Serious If an incident were to occur, it would be likely that an injury requiring medical treatment would result.	Activity can proceed but substantial efforts should be made to reduce the risk. Risk reduction measures should be implemented urgently within a defined time period and it might be necessary to consider suspending or restricting the activity or to apply interim control measures until this has been completed.
6 – 10	Medium If an incident were to occur, there would be some chance that an injury requiring First Aid treatment would result	Activity can proceed but consideration should be given as to whether the risks can be lowered. Control measures must be monitored and reviewed as required to ensure they remain suitable and sufficient.
1 – 5	Trivial or Negligible If an incident were to occur, there would be little likelihood that an injury would result	No additional controls are necessary as these risks are considered acceptable. Activity should be regularly reviewed to ensure there is no change to the risk rating and that controls are maintained.

***Note:** A numerical rating has been used in column 4 of the risk assessment sheets to describe the risk potential for the hazard identified. This method has been used in an attempt to ensure that the levels of risk will be understood and clear to all those operating within the school.

Staff Pupils Visitors	<p>Spread of COVID-19 virus</p> <p>Persons currently deemed most at risk of complications if they catch the coronavirus are:</p> <ul style="list-style-type: none"> • 60 years of age and over • have long-term medical conditions – i.e. heart disease, lung disease, high blood pressure, diabetes or cancer • pregnant women <p>Known effects of the coronavirus:</p> <ul style="list-style-type: none"> • A fever (high temperature of 38 degrees Celsius or above) • A cough - this can be any kind of cough, not just a dry cough • Shortness of breath or breathing difficulties • Loss of sense of smell • Loss of sense of taste or distortion of sense of taste • Death 	<p>All cleaning will be undertaken in line with DES and public health guidance.</p> <ul style="list-style-type: none"> ✓ It is recommended cleaning an area with normal household disinfectant after a suspected coronavirus (COVID-19) case. This will reduce the risk of passing the infection on to other people ✓ The area should be kept closed and secure for 72 hours (if possible) for cleaning as the amount of virus living on surfaces will have reduced significantly by 72 hours ✓ For cleaning purposes, wear a face mask, disposable or washing up gloves. These should be double-bagged, then stored securely for 72 hours and then put with the regular rubbish. ✓ Using a disposable cloth, first clean hard surfaces with warm soapy water. Then disinfect these surfaces with the cleaning products you normally use. Pay particular attention to frequently touched areas and surfaces, such as toilets and door handles ✓ If an area has been heavily contaminated, such as with visible bodily fluids, from a person with coronavirus (COVID-19) consider using protection for the eyes, mouth and nose, as well as wearing gloves and apron ✓ Wash hands regularly with soap and water for 20 seconds and after removing gloves, aprons and other protection used while cleaning ✓ Public areas where a symptomatic individual has passed through and spent minimal time, such as corridors, but which are not visibly contaminated with body fluids can be cleaned as normal ✓ All surfaces that the symptomatic person has come into contact with must be cleaned and disinfected, including objects which are visibly contaminated with body fluids 	Severe & Serious Risk	Board of Management Principal Cleaning staff
